

BRADYKININ B<sub>1</sub> RECEPTOR ANTAGONISTSAbstract of the Invention

Bradykinin B<sub>1</sub>-receptor antagonists of formula

are disclosed. The compounds are useful for treating diseases associated with inappropriate bradykinin receptor activity, such as diabetic vasculopathy, 5 inflammation, pain, hyperalgesia, asthma, rhinitis, septic shock, atherosclerosis and multiple sclerosis. Pyrimidines, triazines, and anilines in which Q is imidazolyl or pyrrolyl are particularly preferred.
